Title of the Project : TaskFlow – Task Management Web Application Using Java

Student Team :

Sr. No.	RegNo	Name
1	1012612021	Om Satpute
2	1012612018	Vaikunth Gaikwad
3	1012511246	Ronak Kashyap
4	1012511242	Pranav Makar

Abstract :

TaskFlow is a web-based task management application that helps users organize and manage their daily tasks efficiently. It allows users to add, view, update, delete, prioritize, and track tasks based on their status and deadlines. The application uses HTML, CSS, and JavaScript for the frontend, Java with Spring Boot for the backend, and MySQL to store task information. The project demonstrates CRUD operations, REST API integration, and database connectivity.

Technology / Tools used :

1. Programming Language: Java
2. Backend Framework: Spring Boot
3. Frontend Technologies: HTML, CSS, JavaScript
4. Database: MySQL
5. Data Access Technology: Spring Data JPA
6. API Communication: REST APIs
7. Build Tool: Apache Maven
8. Development Environment: VS Code / Eclipse

System Flow Diagram :

User → Web Interface → REST API Request → Spring Boot Backend → Service Layer → Repository Layer → MySQL Database

The response is returned from the database through the backend to the web interface, where the updated task information is displayed to the user.

Expected Outcomes:

1. Develop a functional and user-friendly task management website.
2. Enable users to create, view, update, and delete tasks.
3. Allow users to assign priorities and deadlines to tasks.
4. Provide task status tracking, including pending, in-progress, and completed tasks.
5. Implement filtering of tasks based on status and priority.
6. Store task information persistently in a MySQL database.
7. Establish communication between the frontend and backend using REST APIs.
8. Gain practical knowledge of Java, Spring Boot, database integration, and full-stack web development.
